ABOUT ME

As a seasoned Solidity Smart Contract Engineer with over 4 years of experience, I bring an in-depth understanding of DeFi, NFTs, DAOs, dApps, blockchain oracles, EVM, cross-chain bridges, layer 2 scaling solutions like optimistic and zero knowledge (ZK) rollups and the wider web3 ecosystem.

With a specialty in Solidity smart contract development, I've contributed to numerous web3 and DeFi projects since 2018 and delivered hundreds of production-ready smart contracts while ensuring best practices and security.

Combining my technical proficiency with a native-level English fluency, I am a skilled communicator, adept at remote collaboration, and always focused on delivering results in this rapidly evolving sector.

EXPERIENCE

ScaleRoad LLC / Full Stack Software Engineer (July 2018 - March 2019)

- A SaaS platform for tracking and managing investment research
- I worked on building custom UI elements and complex backend logic

Avix Finance / Smart Contract Engineer (March 2019 - December 2020)

- Tokenized volatility protocol designed to track the price of VIX on-chain
- I built the smart contracts for the protocol and integrated on-chain price oracles

LongTerm Finance / Smart Contract Engineer (December 2020 - June 2022)

- Tokenized index fund protocol tracking the market cap of the entire altcoin market
- I built the entire protocol from scratch, and helped create their frontend dashboard

MAJR, Inc. / Senior Smart Contract Engineer (June 2022 - May 2023)

- Web3 media company focused on the creator memberships & digital assets
- I designed and developed smart contracts for the MAJR DAO from the ground up

TokenFlow / Senior Smart Contract Engineer (May 2023 - December 2023)

- Smart contract development agency specialized in building custom solutions
- Led the design and development of complex smart contract systems

Intuition Systems, Inc. / Senior Solidity Engineer (January 2024 - Present)

- The trust protocol, bridging the gap between human trust and trustless systems
- Working on building and improving smart contracts for the Intuition Protocol

SKILLS

Solidity

Foundry

Hardhat

Ethers.js

TypeScript

Node.js
